While every effort has been made to achieve accuracy and consistency in the information presented in this chart, there is an unavoidable element of subjectivity inherent in product-to-product comparisons without empirical formula determinations. Please understand the intention of Kelco Supply Company is to provide a useful tool for our customers' use in making informed product selections.

Please bear in mind that indexes are provided as general guidelines only; they are not the primary basis for the comparative actions and applications of the listed products. Remember, index is a mathematical indication of the percentage of formaldehyde gas in solution. Many additional components affect a fluid's overall performance e.g. surfactants, humectants, buffers, anticoagulants, etc. All characteristics of a fluid are taken into consideration for the purpose of these comparisons.
